### To see behind the fences

Bone marrow fibrosis can be seen in the set of reactive, infectious or neoplastic conditions and poses difficult differential diagnoses - what does it mean, how should we evaluate it and how can we diagnose it?

This workshop intends to give all Pathologists – Residents, general Pathologists and Haematopathologists – “to see behind the fences”, with lectures and presentation of practical cases, submitted by the participants.

So we invite you to join us and send your cases to be in advance evaluated by Prof. Falko Fend, so we can all enjoy and participate in this informal and, we hope, productive course, in the new, modern and beautiful Vila Franca de Xira Hospital.
